

Description of Process – Utility Plastics

Utility Plastics manufactures and distributes plastic meter boxes for water, irrigation, and fiber markets. All products are made from polypropylene resins through an injection molding process, which involves heating and applying pressure to resin in a die to form the final part. The manufacturing process produces no off-gassing and does not require water or sewer discharge. Finished parts are palletized, strapped, wrapped, and stored in racking. Shipments of palletized products are sent out daily via truck.
